PROFILE

- LNG-focused trading analyst with front-office experience across physical LNG, gas, oil, and derivatives
- Strong quantitative background (NUS MFE) with proven ability to build pricing tools, evaluate contract flexibility and optionality, and support traders in commercial decisions
- Experienced in cross-functional coordination with Shipping, Risk, Operations, and Contracts to enhance trading accuracy and deal execution, with proficiency in advanced Excel, Python for modeling, and analytics

EDUCATION

National University of Singapore (NUS)

Aug 22- Dec 24
Aug 14- Dec 17

- Master of Financial Engineering; Focused on option pricing, stochastic calculus, and applying machine learning techniques to model financial risks and optimize trading strategies
- Implemented Kirk's approximation and change-of-numeraire methods for spread option pricing in Final Year Project: Application of Spread Option in LNG Geographical Arbitrage
- Bachelor of Business Administration; Double Specialization in Finance and Supply Chain Management Cumulative Average Point 4.43/5.0 (Honors with Distinction), Dean's Lister (top 5%)

Jan 13- Dec 14

Victoria Junior College

- GCE 'A' Levels; Awarded distinctions in Chemistry, Mathematics, Chinese, Physics and Project Work

WORK EXPERIENCE

Jul 23 – Till Now

Centrica LNG, Singapore

Senior LNG Trading Analyst

- Support counterpart coverage including relationship management, deal negotiation, and MSPA review across spot and term LNG deals
- Monitor contract optionality, in/out-of-money positions, and automate optimization dashboards to maximize portfolio P&L
- Apply advanced option pricing and stochastic models to evaluate LNG trading structures, optionality, and value drivers across term and spot deals
- Build and maintain Python/Excel pricing, scenario, and curve construction frameworks used directly by LNG traders to support commercial decision-making
- Perform in-depth analysis across short/mid/long-term opportunities, covering term structure, price volatility, market trends, and contract optionality
- Track LNG vessels for unusual movements and Atlantic–Pacific cargo diversions for arbitrage monitoring
- Developed an ADP planning tool and semi-automated nomination and scheduling deadline tracking to enhance operational coordination

Jul 22 – Jul 23

Woodside Energy Trading Singapore Pte. Ltd., Singapore

LNG Trading Analyst

- Conducting market analysis and formulating timely & forward-looking views of gas market developments impacting LNG trading decisions
- Delivering trading and optimization idea write-ups with scenario backtests and risk/return summaries
- Automating daily PnL and exposure analytics across portfolios; implementing reconciliation that reduce PnL breaks and accelerating end-of-day sign-off; reducing manual process by 30%
- Coordinating with Market Risk / Shipping / Ops to align pricing assumptions and delivery optionality; reducing pricing-to-booking discrepancies throughout trade lifecycle
- Performing post deal analysis and reconciliation on P&L against pre-deal shipping economics

Feb 17 – Apr22
(May19 – Apr22)

ENGIE Global Market, Singapore

Sales and Trading – Commodity Derivatives

- Quoting APAC clients on energy derivatives; developing valuation methods for common options / swaps and improved pricing consistency via standardized inputs and Greeks checks. (Oil, Gas, Power, and Coal)
- Working closely with research team and recommending strategies to clients based on physical needs
- Expanding business via actively searching new clients and generating more deals with existing clients

(Feb17 - May19)

Trade Support Analyst

- Managing trade lifecycle (booking, confirmations, settlements) for futures/options
- Leading automation projects by implementing new systems and proposing automation plans
- Enhancing workflow and contributing to projects such as migrating portfolios, managing exotic products

ENRICHMENT ACTIVITIES

Projects and Research

Quant & Systematic Trading

- **Systematic Signals:** Prototyping Python backtests on energy/equity ETFs using mean-reversion, carry/term-structure, and volatility signals; tracking Sharpe, turnover, and max drawdown
- **Equity Hub (*in development*):** Building a personal equity analytics platform for stock screening, fundamental analysis, and signal tracking; applying sensitivity analysis on correlation and vol, hedge ratios, and stress tests

AI & Developer Tooling

- **Agentic AI Development:** Building developer tools using Claude API, agentic coding workflows, and local LLM deployments (Ollama, Openclaw); applying LLM-assisted development to accelerate quantitative research and internal tooling
- **Algo Trading System (*in development*):** Systematic backtest framework for energy/equity ETFs across mean-reversion, carry/term-structure, and volatility strategies

Aug 16 – Dec 18

NUS Business Analytics Consulting Society (BACS)

President & Analytics Consultant Team Leader

- Conducting Excel workshops for beginners and students who are interested in Business Analytics
- Involving in real life projects provided by partner companies
- Collaborating with team on data mining, cleaning, as well as visualization

AWARDS

- NUS CFA Scholarship; MOE SM1 Program Scholarship
- Gold Award in Singapore Mathematics Competition

SKILLS

- Technical Skills: Python, Excel (VBA), Matlab, R, Power BI, Tableau, Bloomberg, Kpler, Dataloy, Claude API, Ollama, Openclaw
- AI/Dev: Agentic Coding, Vibe Coding, LLM-Assisted Development, Prompt Engineering, Cursor
- Languages: Fluent in English and Mandarin (written and spoken)
- NUS Archery Team; Badminton
